Learner-centered Education from Pedagogy to Andragogy
(Making your conferences & rotations a learning [not teaching] experience.)

Lawrence Loo, MD
Assistant Dean for Continuing Medical Education
Professor - Department of Medicine, SM

Tamara Thomas, MD
Vice-Dean for Academic Affairs
Professor - Department of Emergency Medicine, SM
“Commercial Interest” is defined by the ACCME (www.accme.org) as “any entity producing, marketing, re-selling or distributing health care goods or services consumed by or used on patients.”
Example: A Teaching Experience
Educational Objectives:

(1) Understand key principles and assumptions of Adult Learning.

(2) Compare and contrast key characteristics of learner-centered (Andragogy) and teacher-centered (Pedagogy) education.

(3) Illustrate and practice educational approaches for adult learners.
“Think-pair-share” Exercise

After looking at the following two movie clips of 4th graders learning, turn to a neighbor and discuss (for 1-2 minutes):

Compare and contrast the teaching styles?
What’s the same? What’s different?
Which classroom would you rather be in? Why?
Teaching 4th Graders Social Studies
Teaching 4th Graders Reading
“Think-pair-share” Exercise

After looking at the following two movie clips of 4th graders learning, turn to a neighbor and discuss (for 1-2 minutes):

Compare and contrast the teaching styles?
What’s the same? What’s different?
Which classroom would you rather be in? Why?

**Key principles and assumptions of Adult Learning!**
Applying Education Theory into Practice

- **Pedagogy:**
  - “To lead a child”
  - Study of being a teacher or the process of teaching *children*
  - Teacher-centered

- **Andragogy:**
  - “To lead a man (or adult)”
  - Study of being a teacher or the process of teaching *adults*
  - Learner-centered
Six Assumptions of Adult Learning

- Adults need to know why they need to learn something.
- Adults are independent and self-directing.
- Adults have accumulated a great deal of experience, which is a rich source of learning.
- Adults value learning that integrates with the demands of their everyday life.
- Adults are more interested in immediate, problem-centered approaches than in subject centered ones.
- Adults are more motivated to learn by internal drives than by external ones.
Seven Principles of Adult Learning

- Establish an effective **learning climate**, where learners feel safe and comfortable expressing themselves.
- **Involve learners** in mutual planning of relevant methods and curricular content.
- **Involve learners** in diagnosing their own needs - this will help trigger internal motivation.
- **Encourage learners** to formulate their own learning objectives – this gives them more control of their learning.
- **Encourage learners** to identify resources and devise strategies for using the resources to achieve their objectives.
- **Support learners** in carrying out their learning plans.
- **Involve learners** in evaluating their own learning – this can develop their skills of critical self-reflection.
Overall Learning Goal

To stimulate and facilitate participants to become self-directed lifelong learners.
Fostering Active → Lifelong Learning Skills

(LCME: Standards for Accreditation of Medical Education Programs Leading to the M.D. Degree. June 2013)

ED-5-A. A medical education program must include instructional opportunities for active learning and independent study to foster the skills necessary for lifelong learning.

It is expected that the methods of instruction and assessment used in courses and clerkships (or, in Canada, clerkship rotations) will provide medical students with opportunities to develop lifelong learning skills. These skills include self-assessment on learning needs; the independent identification, analysis, and synthesis of relevant information; and the appraisal of the credibility of information sources. Medical students should receive explicit experiences in using these skills, and they should be assessed and receive feedback on their performance.
Practice-based Learning and Improvement IV.A.5.c)

Residents must demonstrate the ability to investigate and evaluate their care of patients, to appraise and assimilate scientific evidence, and to continuously improve patient care based on constant self-evaluation and life-long learning. (Outcome)

ACGME approved: February 11, 2007; effective: July 1, 2007
ACGME approved focused revision: September 26, 2010; effective: July 1, 2011
ACGME approved categorization: February 7, 2012; effective: July 1, 2013
ACGME approved focused revision: June 9, 2013; effective: July 1, 2013

Competency-based and Learner-centered Education

Self-directed Lifelong Learners
An attribute involving a set of *self-initiated activities* and *information-seeking skills* with sustained *motivation* to learn and the ability to recognize one’s own *learning needs*.

Lifelong learning begins with *self-reflection* and the recognition of one’s own learning needs, proceeds to asking questions, and then having the motivation and skills to find answers to one’s own questions.
Faculty in medicine are expected to teach, yet most faculty enter their academic positions underprepared for their roles as medical educators—even when they assume education leadership positions. This lack of formal training in teaching may be due, in part, to a lack of recognition of the complex skills (from techniques in microteaching to meta-skills in program evaluation) necessary to succeed as a medical educator.
Competencies for Medical Educators: 4 Core Values
(Academic Medicine October 2011;86:1211-20)

- **Learner Engagement**
  - Ability to connect and intellectually engage an individual learner or groups of learners

- **Learner-Centeredness**
  - Putting the learner first and tailoring the education program to meet the learner “where the learner is”

- **Adaptability**
  - Need to change teaching modalities and content over time to respond to learners

- **Self Reflection**
  - Ability for educators to think critically about their educational encounters and seek ways to improve
Self-Reflection & Group Activity

The Learner-Centeredness Scale
How “Learner-centered” Are You?

Learner-centeredness Scale

<table>
<thead>

Learning & Teaching Styles
(“Mini-case” Illustration)
Name at least one area this resident could improve upon as a teacher and evaluator of medical students?
“Mini-case”: Name at least one area this resident could improve upon as a teacher and evaluator of medical students?

I think this resident needs to be more in tune with what the students’ needs are. For example, she would usually keep us for an extra hour to "teach", but she would normally pick the topic to be taught, and the topic was usually something very basic.

He is very knowledgeable and willing to teach, but he should choose the topics to teach rather than leave it up to the students as he is more knowledgeable of what is relevant for the patients.

Who is right? Who is wrong?

What programmatic intervention (if any) would you recommend?
Which teaching style fits best for this learner in this context?

Applying Knowles’ Andragogy to Resident Teaching

Elisabeth E. Bennett, PhD, director, Education Research and Development, Rebecca D. Blanchard, PhD, assistant professor, Education Research, and Kevin T. Hinchey, MD, program director, Internal Medicine Residency Program, Baystate Medical Center

Developing teaching skills in residents is a critical component of medical education because residents spend up to 20% of their time teaching junior learners. They often rely on the traditional pedagogical approaches that they observed during their years of formal schooling, but these often do not translate well with their adult learners.

One way to develop residents’ teaching skills is to frame teaching goals from the perspective of andragogy, or the “art and science of helping adults learn.”*4*5 Andragogy, popularized by Malcolm Knowles, offers principles that describe how adults learn differently than children. These principles can help residents improve their teaching, place more control of the learning process into the hands of their students, and provide insight into their own learning processes.

**Adult Learning Theory**

Adult learning theory is a complex phenomenon. Andragogy is one set of foundational principles, one model within a field of interconnected learning models, that address how adults acquire knowledge.

**Malcolm Knowles’ Five Tenets of Andragogy**

1. Adults have a need to know why they need to know something, and they learn best through self-discovery with real and simulated experiences.
2. Adults have an independent, self-concept, take responsibility for their lives, and are increasingly self-directed, and have a deep need to control learning.
3. Readiness to learn results from real-life problems and entry into new developmental stages and changing social roles.

**Guiding Residents to Incorporate Andragogy**

The table below demonstrates some teaching goals developed in line with Knowles’ tenets of andragogy that residents can apply to junior learners and adult patients. Many of the teaching methods described below encourage self-assessment, the process of evaluating one’s knowledge and understanding, and self-reflection, the process of making meaning from learning experiences. Both concepts engage learners and motivate them to take control of their own learning, which will more quickly lead to ownership of learning and promote autonomy.

<table>
<thead>
<tr>
<th>Resident Teaching Goals by Andragogical Tenet</th>
<th>Teaching Methods</th>
</tr>
</thead>
<tbody>
<tr>
<td>Encourage continual knowledge development through planning, feedback, and assessment of experiential and applied learning</td>
<td>Assess the learners’ needs at the outset and their outcomes after teaching</td>
</tr>
<tr>
<td>Facilitate autonomy by increasing degrees of learner control and promoting a peer relationship</td>
<td>Develop specific goals and objectives for the learners, consistent with what they need to learn</td>
</tr>
<tr>
<td>Adapt teaching to leaner needs and effectively bridge prior knowledge and new learning objectives</td>
<td>Foster a climate of learner inquiry and acceptative feedback from learners to retool teaching</td>
</tr>
<tr>
<td>Adapt teaching to individual and collective levels of life development and understand what contributes to a positive climate for change</td>
<td>Provide constructive feedback that encourages accurate self-assessment and self-reflection</td>
</tr>
<tr>
<td>Teach most relevant and immediately applicable content to solve real clinical problems</td>
<td>Engage learners and motivate autonomy in a relationship of respect</td>
</tr>
<tr>
<td>Contribute increased knowledge development through planning, feedback, and assessment of experiential and applied learning</td>
<td>Activate learning by seeking learners’ input</td>
</tr>
<tr>
<td>Facilitate autonomy by increasing degrees of learner control and promoting a peer relationship</td>
<td>Ask learners to articulate their ideas, thereby fostering learner confidence</td>
</tr>
<tr>
<td>Adapt teaching to leaner needs and effectively bridge prior knowledge and new learning objectives</td>
<td>Adjust teaching to different contexts, cultures, and levels of prior knowledge</td>
</tr>
<tr>
<td>Adapt teaching to individual and collective levels of life development and understand what contributes to a positive climate for change</td>
<td>Lead large- and small-group discussions, customized to learning needs</td>
</tr>
<tr>
<td>Teach most relevant and immediately applicable content to solve real clinical problems</td>
<td>Establish rapport with learners and use examples familiar to them</td>
</tr>
<tr>
<td>Contribute increased knowledge development through planning, feedback, and assessment of experiential and applied learning</td>
<td>Evaluate evidence of learning to determine readiness for new roles</td>
</tr>
<tr>
<td>Facilitate autonomy by increasing degrees of learner control and promoting a peer relationship</td>
<td>Be a positive role model, recognizing that people adapt in different ways</td>
</tr>
<tr>
<td>Adapt teaching to leaner needs and effectively bridge prior knowledge and new learning objectives</td>
<td>Provide supervision and advocacy appropriate to learner level</td>
</tr>

Vice-Chair for Education and Faculty Development
Chauncey Smith Endowed Chair & Professor of Medicine
Department of Medicine - Loma Linda University School of Medicine
One-Minute Preceptor: Five Microskills for Clinical Teaching

Diagnose Patient

Teach
(1) Teach general rules
(2) Provide positive feedback
(3) Correct errors

Teacher-Centered Education

Case Presentation

Inquiry

Discussion
One-Minute Preceptor: Five Microskills for Clinical Teaching

### Diagnose Patient

- **Case Presentation**
- **Discussion**
- **Inquiry**

### Teach

- (3) Teach general rules
- (4) Provide positive feedback
- (5) Correct errors

### Diagnose Learner

- (1) Ask for a commitment
- (2) Probe for underlying reasoning

Learner-Centered Education
1. Get a Commitment -
   What do you think is going on?

2. Probe for Supporting Evidence -
   What led you to that conclusion?

3. Teach General Rules -
   When this happens, do this . . .

4. Reinforce what Was Right -
   Specifically, you did an excellent job of . . .

5. Correct Mistakes -
   Next time this happens, try this . . .
Measurable Outcomes from the One-Minute Preceptor:

- Improved student ratings of teaching skills
- More teaching focused on the patient’s specific illness
- Learners more motivated to do outside reading
- Faculty greater confidence in rating student performance
- Faculty have greater confidence in giving more specific feedback to learners
- Faculty spent more time understanding the learner’s thinking processes and less time soliciting data from the learner
The Stanford Faculty Development Program

- Learning Climate
- Control of Session

**Communication of Goals**
- Promoting Understanding & Retention
- Evaluation
- Feedback
- Promoting self-directed learning (Teacher’s knowledge)
The teacher establishes and explicitly expresses the expectations for the learner.

- What will the learner be able to do (especially after the teacher has left)?
- Defined in terms of specific, observable behaviors teachers would like to see in their learners
- Clear goals guides the learner, the evaluation of the learner, and the feedback to the learner.

Communication of Goals
(The Stanford Faculty Development Program
Exercise #9:
What is the Value of Orientation?
Expectations & Evaluation are the two bookends of a rotation.

**Orientation:** What to include? (“5 Rs”)
- Routine
- Roles & Responsibilities
- Ratings (Feedback & Evaluation)
- Realities

**Agenda Setting:** Should not be the attending physicians’ task alone; learners desire substantial input – Ask them what are your learning goals for this rotation?
The Stanford Faculty Development Program

- Learning Climate
- Control of Session
- Communication of Goals
- Promoting Understanding & Retention
- Evaluation
- Feedback
- Promoting self-directed learning
The teachers role in enhancing the learners’ abilities to identify and act on their own educational needs

- How can the I (the teacher) get you (the learner) to do this without me?
- Teachers who promote self-directed learning are often perceived by learner’s as “knowledgeable.”
End of the day, rotation or teaching conference:

A Successful Formula for Educational Conferences & Experiences

(Gleason BL, et al: Active-learning strategies primer for achieving ability-based educational outcomes. Am J Pharm Educ 2011; 75(9) Article 186)

<table>
<thead>
<tr>
<th>Knowledge Probe</th>
</tr>
</thead>
<tbody>
<tr>
<td>Posing questions at the start of a lecture is a good way to stimulate thinking about the content you will cover for the day. It primes the mind to apply concepts. Prepare 2-3 short-answer questions or 5 multiple-choice questions from the lecture content. Have the students work in pairs or individually to answer the questions, have them save their answers. The questions can be readdressed in a mid-lecture or end-of-lecture activity (case that applies the concepts), to help students see how their knowledge &amp; understanding has increased.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Think-Pair-Share</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pose a question/problem. Students spend 1-2 minutes thinking about the problem alone then discuss problem in pairs. Pairs are asked to report to the entire class. Works well in large and small classroom settings at any time during the class. Effective way to involve learners, especially those apprehensive about speaking up in class. Provides instructor with feedback on what learners have/ have not grasped.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Pause and Clarify</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ask learners to discuss idea with neighbor. Pause lecture for 2 minutes while learners chat with neighbors about their respective understanding of key or difficult conceptual content. Aim is for each student to clarify their own understanding by comparing their perspective with that of their partner. Works best when teacher asks question requiring application of understanding, rather than simply recall of information.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Quick Think</th>
</tr>
</thead>
<tbody>
<tr>
<td>Every 15 minutes or so insert a “quick think” exercise to increase attention, interest, and learning. Participation options vary: students can record their responses individually and then explain their answers to a neighbor, they can verbally generate an answer with a neighbor, or they can be asked to silently think about a possible response. Provide feedback so that students can hear or share correct or possible answers. Some examples include: Select the best answer, correct the error, complete a sentence starter, compare or contrast, support a statement, re-order the steps, reach a conclusion, paraphrase the idea.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Mini-Case</th>
</tr>
</thead>
<tbody>
<tr>
<td>Begin the lecture with a realistic case involving the concepts that will be discussed that day. Include a brief question that requires the application of key concepts. Students will each work on the question then report their answers when called upon. Mini-cases are more effective when students are presented the case beforehand (in notes, at the end of previous session or as pre-class material).</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Socratic Questioning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Query students in manner that helps them uncover answers. Ask learners about thought process, probe assumptions, and ask for evidence. Can be used in large and small classes, but learning climate guidelines must be established: respect all around; non-judgmental attitudes.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Minute Writes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pose a question about a course concept; ask learners to write a response in 1-2 minutes. Collect responses &amp; without revealing names, share sample responses &amp; give feedback. Works in large or small settings; effective technique for determining learner progress — understanding course material, reaction to course material.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Muddiest Point</th>
</tr>
</thead>
<tbody>
<tr>
<td>As with “Minute Writes,” students are given a couple of minutes to write the “muddiest point” or most confusing concept to understand. Can provide clarification in real time or through email/online discussion.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Critical Thinking Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Provide a small group breakout session designed around a thought provoking question/case that concerns the material just presented and/or builds upon concepts presented in previous lectures. After breakout, select a student from a group to respond to the question or task. Then ask others to participate by adding to the case. Finish session by providing a summary.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Jigsaw Learning Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>Jigsaw learning requires that students become experts in a subject area and then teach that topic to peers who have become experts in other topics. Steps: 1) divide class into small groups of 4 to 6 students. 2) Assign each group a subject area to learn. 3) Rearrange groups so that there is 1 expert in each group. Experts reciprocally teach their peers.</td>
</tr>
</tbody>
</table>
“Orientations to Teaching and their Effect on the Quality of Student Learning”
(Kember D, GowL: J Higher Educ 1994;65:58-74)

“How teachers understand learning will influence the way they teach . . .”

and how their students learn as well.”
Overall Learning Goal

To stimulate and facilitate participants to become self-directed lifelong learners.
Promoting Learner-centered Education and Lifelong Learners

**Specific Techniques for Immediate Use:**

- **OMP #1 Case Presentations:** What do you think is going on? What lead you to that conclusion?
- **Orientation (at the Start of the rotation, day, clinic):**
  What would you like to learn?
- **OMP #2 (at the End of rounds, clinics or conferences):**
  » What was the **most important** thing you learned today?
  » What **question remains** the uppermost in your mind?
  » What was the **muddiest point** from today?

**Planning for Learning:** Consider using the “Promoting Principles of Adult Learning Planner” (Making your conferences a learning [not teaching] experience)
A little boy tells his friend,
  “I taught Rover how to whistle!”
With an ear up to the dog’s face, the friend responds,
  “I don’t hear him whistling.”
The first boy responds,
  “I said I taught him. I didn’t say he learned it.”
"We must view education as an investment, not an expense."
